

REFRIGERATION SERVICE PARTNERS

Add planned refrigeration work to your service business.

More value for customers you already serve.

Bring GreenTek refrigeration-efficiency upgrades into conversations with your existing customers. Plan suitable installation work alongside your emergency-service and maintenance commitments.

1 Start with familiar equipment.

Identify walk-in coolers, freezers and other commercial refrigeration systems in your customer base. Review equipment and operating needs with GreenTek before proposing a project.

2 Installation project work. Potential commissions.

Pursue paid installation work for suitable GreenTek projects, with potential referral or sales commissions through an agreed partner arrangement. Project assignments, schedules and compensation are agreed in advance.

3 Keep the customer relationship yours.

You choose which customers to introduce. Agree project scope, delivery responsibilities and commercial terms before making commitments together.

GreenTek uses phase change thermal storage and engineered airflow to store cooling, reduce refrigeration runtime and help maintain steadier temperatures in compatible systems.

Tablet installation workflow: in development.

Discuss a GreenTek service partnership.
